

🚀 QUICK START

1. **Connect:** `ssh user@server`
2. **Launch:** `tmux new -s work`
3. **Split/Run:** Create panes, execute commands.
4. **Disconnect:** Press `Ctrl+b` then `d`
5. **Resume:** `tmux a -t work`

Install: `sudo apt install tmux` (Debian/Ubuntu)

🖥️ SESSION CLI MANAGEMENT

COMMAND	DESCRIPTION
<code>tmux new -s <n></code>	New session named <n>
<code>tmux new -s <n> -d</code>	Create in background
<code>tmux ls</code>	List active sessions
<code>tmux a -t <n></code>	Attach to named session
<code>tmux a</code>	Attach to last active
<code>tmux kill-session -t <n></code>	Kill named session
<code>tmux kill-server</code>	Kill all sessions/server
<code>tmux rename-session <n></code>	Rename current session

🔗 SESSION KEYBINDINGS

Inside active session:	
SHORTCUT	ACTION
<code>Ctrl+b d</code>	Detach session (keep active)
<code>Ctrl+b s</code>	Interactive session list
<code>Ctrl+b \$</code>	Rename current session
<code>Ctrl+b (</code>	Switch to previous session
<code>Ctrl+b)</code>	Switch to next session

Your processes survive SSH disconnections.

📖 WINDOWS (TABS)

SHORTCUT	ACTION
<code>Ctrl+b c</code>	Create new window
<code>Ctrl+b n</code>	Next window
<code>Ctrl+b p</code>	Previous window
<code>Ctrl+b 0-9</code>	Go to window by number
<code>Ctrl+b ,</code>	Rename active window
<code>Ctrl+b w</code>	Choose window from list
<code>Ctrl+b .</code>	Move/reorder window index
<code>Ctrl+b &</code>	Kill current window

📐 PANES (SPLITS)

SHORTCUT	ACTION
<code>Ctrl+b %</code>	Split pane vertically
<code>Ctrl+b "</code>	Split pane horizontally
<code>Ctrl+b o</code>	Cycle to next pane
<code>Ctrl+b ;</code>	Jump to previous pane
<code>Ctrl+b {</code>	Swap pane with previous
<code>Ctrl+b }</code>	Swap pane with next
<code>Ctrl+b x</code>	Close active pane
<code>Ctrl+b !</code>	Break pane into new window

🏠 NAVIGATION & LAYOUTS

SHORTCUT	ACTION
<code>Ctrl+b Arrows</code>	Navigate between panes
<code>Ctrl+b q</code>	Show pane indexes
<code>Ctrl+b z</code>	Toggle pane full-screen zoom
<code>Ctrl+b Space</code>	Cycle default layout styles
<code>Ctrl+b t</code>	Show digital clock overlay
<code>Ctrl+b ?</code>	List all bound shortcuts
<code>Ctrl+b :</code>	Enter tmux command line

📄 COPY MODE (SCROLLBACK)

SHORTCUT	ACTION
<code>Ctrl+b [</code>	Enter scroll/copy mode
<code>Space</code>	Begin selecting text
<code>Arrows</code>	Navigate cursor selection
<code>PgUp</code> / <code>PgDn</code>	Scroll terminal history
<code>Enter</code>	Copy select text to buffer
<code>Ctrl+b]</code>	Paste buffer contents
<code>q</code> / <code>Esc</code>	Exit copy mode

🔍 SEARCH (IN COPY MODE)

SHORTCUT	ACTION
<code>/</code>	Search forward
<code>?</code>	Search backward
<code>n</code>	Go to next match
<code>N</code>	Go to previous match
<code>Enter</code>	Jump straight to selection

📏 PANE RESIZING

SHORTCUT/CMD	ACTION
<code>Ctrl+b Arrows</code> (Hold)	Resize active pane 1 cell
<code>Ctrl+b Alt + Arrows</code>	Resize active pane 5 cells
<code>resize-pane -L <n></code>	Grow pane Left by <n>
<code>resize-pane -R <n></code>	Grow pane Right by <n>
<code>resize-pane -U <n></code>	Grow pane Up by <n>
<code>resize-pane -D <n></code>	Grow pane Down by <n>

🖱️ MOUSE & CUSTOMIZATION

SHORTCUT / COMMAND	ACTION
<code>set -g mouse on</code>	Enable mouse scrolling/sizing
<code>Click + Drag</code>	Select and copy text in pane
<code>Left-Click</code>	Instantly switch focus to pane
<code>Drag Pane Border</code>	Resize panes interactively

Enable mouse in `~/ .tmux.conf` for default use.

🔄 CONFIG & CUSTOMIZATION

COMMAND	DESCRIPTION
<code>source-file ~/.tmux.conf</code>	Reload active configuration
<code>show-options -g</code>	View global session configurations
<code>show-window-options -g</code>	View global window configurations

Command mode prompt: `Ctrl+b` then `:`

🔧 ADVANCED CLI COMMANDS

COMMAND	DESCRIPTION
<code>tmux list-panes</code>	Output active terminal panes list
<code>tmux list-windows</code>	Output list of all windows
<code>tmux show-buffer</code>	Output modern copy buffer data
<code>tmux capture-pane -p</code>	Print entire pane history inline

WORKFLOW AT A GLANCE

1. Connect via SSH → 2. Start Session (`tmux new`) → 3. Perform Work (Splits/Windows) → 4. Detach (`Ctrl+b d`) → 5. Close SSH Client → 6. Reattach (`tmux a`)
